Preface

We would like to present, with great pleasure, the inaugural volume-11, Issue-10, October 2025, of a scholarly journal, *International Multispeciality Journal of Health*. This journal is part of the AD Publications series *in the field of Medical, Health and Pharmaceutical Research Development*, and is devoted to the gamut of Medical, Health and Pharmaceutical issues, from theoretical aspects to application-dependent studies and the validation of emerging technologies.

This journal was envisioned and founded to represent the growing needs of Medical, Health and Pharmaceutical as an emerging and increasingly vital field, now widely recognized as an integral part of scientific and technical statistics investigations. Its mission is to become a voice of the Medical, Health and Pharmaceutical community, addressing researchers and practitioners in below areas

Clinical Specialty and Super-specialty Medical Science:

It includes articles related to General Medicine, General Surgery, Gynecology & Obstetrics, Pediatrics, Anesthesia, Ophthalmology, Orthopedics, Otorhinolaryngology (ENT), Physical Medicine & Rehabilitation, Dermatology & Venereology, Psychiatry, Radio Diagnosis, Cardiology Medicine, Cardiothoracic Surgery, Neurology Medicine, Neurosurgery, Pediatric Surgery, Plastic Surgery, Gastroenterology, Gastrointestinal Surgery, Pulmonary Medicine, Immunology & Immunogenetics, Transfusion Medicine (Blood Bank), Hematology, Biomedical Engineering, Biophysics, Biostatistics, Biotechnology, Health Administration, Health Planning and Management, Hospital Management, Nephrology, Urology, Endocrinology, Reproductive Biology, Radiotherapy, Oncology and Geriatric Medicine.

Para-clinical Medical Science:

It includes articles related to Pathology, Microbiology, Forensic Medicine and Toxicology, Community Medicine and Pharmacology.

Basic Medical Science:

It includes articles related to Anatomy, Physiology and Biochemistry.

Spiritual Health Science:

It includes articles related to Yoga, Meditation, Pranayam and Chakra-healing.

Each article in this issue provides an example of a concrete industrial application or a case study of the presented methodology to amplify the impact of the contribution. We are very thankful to everybody within that community who supported the idea of creating a new Research with *IMJ Health*. We are certain

that this issue will be followed by many others, reporting new developments in the Medical, Health and Pharmaceutical Research Science field. This issue would not have been possible without the great support of the Reviewer, Editorial Board members and also with our Advisory Board Members, and we would like to express our sincere thanks to all of them. We would also like to express our gratitude to the editorial staff of AD Publications, who supported us at every stage of the project. It is our hope that this fine collection of articles will be a valuable resource for *IMJ Health* readers and will stimulate further research into the vibrant area of Medical, Health and Pharmaceutical Research.

Dr. Kusum Gaur
(Chief Editor)

Mr. Mukesh Arora
(Managing Editor)

Board Members

Dr. Kusum Gaur (Editor-in-chief)

Dr. Kusum Gaur working as professor Community Medicine and member of Research Review Board of Sawai Man Singh Medical College, Jaipur (Raj) India.

She has awarded with WHO Fellowship for IEC at Bangkok. She has done management course from NIHFV. She has published and present many research paper in India as well as abroad in the field of community medicine and medical education. She has developed Socio-economic Status Scale (Gaur's SES) and Spiritual Health Assessment Scale (SHAS). She is 1st author of a book entitled " Community Medicine: Practical Guide and Logbook.

Research Area: Community Medicine, Biostatistics, Epidemiology, Health and Hospital Management and Spiritual Health.

Mukesh Arora (Managing Editor)

BE (Electronics & Communication), M.Tech (Digital Communication), currently serving as Assistant Professor in the Department of ECE.

Dr. AMER A. TAQA

Dr. AMER A. TAQA is Professor and Head in Dental Basic Science Mosul University, Mosul, IRAQ. He has been registrar of department of Dental Basic Science Mosul University, Mosul, IRAQ. He has published about 100 of research papers and out of that 50 were of international level. He has awarded many times for scientific researches by Government. He has been member of many examination committees and also is a Member in Iraqi Scientific Staff. He has been working as Editor - reviewer in many journals.

Research Area: Dental Science.

Dr. I.D. Gupta

Dr. I. D. Gupta is Professor Psychiatry and working as additional Principal and Dean of student welfare in SMS Medical College, Jaipur.

He is recipient of Prof. Shiv Gautam oration award by Indian Psychiatric Society. He has done training in YMRS at Monte Carlo and BPRS at Singapore. He has been President Indian Psychiatric Society, Rajasthan State Branch. He is author of "Psycho Somatic Disorder" chapter in 1st edition post graduate text book of Psychiatry by Vyas and Ahuja. He has also worked with National Mental Health Programme and has a lot of publication.

Research Area: Community Mental Health, Psycho somatic and liaison Psychiatry.

Dr. Lokendra Sharma

Dr. Lokendra Sharma is Associate Professor Pharmacology and working as Nodal officer of SMS Medical College, Jaipur.

He is recipient of WHO Fellowship award on Poison Patient Management at Vietnam. He is resource faculty for Experimental Toxicology and Basic Course for Medical Education. He is presented and published a lot of research articles at national and international level.

Research Area: PHARMACOLOGY

Dr. Anuradha Yadav

Dr. Anuradha Yadav is working as Professor Physiology, SMS Medical College, Jaipur (Rajsthan) India. She is a popular medical teacher and research scholar who had many publications in indexed journals.

Research Area: CVS & CNS physiology, Medical Education and Spiritual Health.

Dr. Rajeev Yadav

Dr. Rajeev Yadav is working as Associate Professor Community Medicine, SMS Medical College, Jaipur (Rajsthan) India. He is member of Research Review Board of the Institute.

He has authored a book entitled "Community Medicine: Practcal Guide and Logbook".

Research Area: His area of Interest are Epidemiology, Biostatistics and Spiritual Health.

Prof. Dillip Kumar Parida

Professor and Head in the Department of Oncology, AIIMS, Bhubaneswar.

He has done the Professional Training in Japan (Osaka University, NIBI, AHCC Research Association, Hyogo Ion Beam Center), ESTRO Fellowship in Denmark and India (AIIMS Delhi, BARC Mumbai, SCB Medical College-Cuttak, MKCG Medical College-Berhampur).

Research Area: Brachytherapy, Total Skin Electron Irradiation, Palliative Radiotherapy, Stereotactic & Conformal radiotherapy, Radiation Cell Biology, Cancer Genetics.

Dr. Praveen Mathur

Dr. Praveen Mathur is working as Professor- Pediatric Surgery and is recipient of Commonwealth Fellowship in Pediatric Laparoscopy from Uk and fellowship award in minimal access Surgery (FMAS). He has done Clinical observer ship in the Department of Pediatric Surgery, Johns Hopkins University, Baltimore, USA. (2008). He has presented and published a number of research articles at national and international level. He is reviewer of prestigious Journal of Pediatric Surgery (JPS) and World Journal of Gastroenterology, Journal of neonatal Surgery (JNS).

Research Area: Pediatric Surgery & Laparoscopy.

Dr Rajeev Sharma (MS; FMAS; FIMSA;FCLS)

He is working as Professor, Department of Surgery, Government Medical College, Chandigarh, India. He has done FMAS, FIMSA and FCLS along with MS (Gen Surgery).

He has about 50 international and national publications to his credit. He has held various positions in the Association of Minimal Access Surgeons of India (AMASI) from time to time. He has also acted as instructor of various AMASI skill courses held at different places in India. He has established Surgical Technique learning centre at GMCH Chandigarh for imparting training to the budding surgeons in the field of minimal access surgery. He is also the reviewer in the subject in various journals.

Research Area: Minimal Access Surgery.

Dr Anshu Sharma (MS ANATOMY)

She is Presently working as assistant professor in the department of Anatomy, GMCH, Chandigarh. She has many publications in various national and international journals. She is executive member of Anatomical Society of India (ASI) and North Chapter of ASI. She is also a member of editorial board of Journal of Medical College Chandigarh.

Research Area: Congenital Malformation, Developmental Anatomy.

Dr. Rajeev Yadav

Dr. Rajeev Yadav is working as Associate Professor Community Medicine, SMS Medical College, Jaipur (Rajasthan) India. He is member of Research Review Board of the Institute.

He has authored a book entitled "Community Medicine: Practical Guide and Logbook".

Research Area: His areas of Interest are Epidemiology, Biostatistics and Spiritual Health.

Dr. Dilip Ramlakhyani

Dr. Dilip Ramlakhyani working as Associate professor Pathology and member of IT Committee of Sawai Man Singh Medical College, Jaipur (Raj) India. He has published many articles in indexed journals.

Dr. Virendra Singh

Dr. Virendra Singh worked as Supernatant and head of department of Pulmonary Medicine, SMS Medical College, Jaipur (Rajasthan) India.

He has gone abroad for many training courses and to present research papers. He had been chairman of Research Review Board of SMS Medical College, Jaipur. He is a great research scholar and had published book related to his faculty and had many publications in indexed journals.

Dr. Mahesh Sharma

Dr. Mahesh Sharma is a Principle specialist General Surgery in Rajasthan State Government, India. He has been PMO of district hospitals for more than 15 years. He has gone abroad as observer of many of training related to his speciality. He has published and present many research paper in India as well as abroad.

He has developed Spiritual Health Assessment Scale (SHAS) with Dr. Kusum Gaur.

Research Area: General Surgery, Health and Hospital management and Spiritual Health.

Dr. Ravindra Manohar

Professor Community Medicine, working as head of department of PSM, SMS Medical College, Jaipur (Rajasthan) India.

Previously he has worked in BP Koirala Institute of Medical Sciences, Nepal. He has visited CDC Atlanta for a Statistical workshop. He has been convener of MBBS and PG exams. He is a research scholar and had many publications in indexed journals.

Dr. Praveen Mathur

Dr. Praveen Mathur is working as Professor- Pediatric Surgery and is recipient of Commonwealth Fellowship in Pediatric Laparoscopy from UK and fellowship award in minimal access Surgery (FMAS). He has done Clinical observer ship in the Department of Pediatric Surgery, Johns Hopkins University, Baltimore, USA. (2008). He has presented and published a number of research articles at national and international level. He is reviewer of prestigious Journal of Pediatric Surgery (JPS) and World Journal of Gastroenterology, Journal of neonatal Surgery (JNS).

Research Area: Pediatric Surgery & Laparoscopy.

Abstract— This report describes the case of a 64-year-old female with morbid obesity (BMI 70) diagnosed with a partially obstructing adenocarcinoma of the transverse colon in August 2023 following episode of PR (per rectal) bleeding. The patient's high BMI makes her a significant anaesthetic risk, requiring preoperative weight loss through a low-carbohydrate, high-protein (LCHP) diet. She achieved a remarkable weight loss before undergoing a successful robotic-assisted right hemicolectomy in February 2024. A repeat CT scan performed prior to surgery showed no evidence of metastatic disease despite the delayed treatment. This case emphasises the importance of tailored, multidisciplinary care in managing colorectal cancer in obese patients with comorbidities and highlights the role of dietary interventions in weight management and cancer care.

Keywords— Colorectal cancer, Low-Carbohydrate High-Protein (LCHP) Diet, Peri-operative Weight Loss, Obesity.

I. INTRODUCTION

Colorectal cancer (CRC) is a leading cause of cancer-related morbidity and mortality worldwide (1, 2). Obesity is a known risk factor for CRC (3) and have significant challenges for treatment, including increased surgical and anaesthetic risks (4). Furthermore, dietary patterns play a crucial role in weight management and cancer prevention (5). This report highlights the case of a morbidly obese patient who successfully underwent delayed surgical treatment for partially obstructed transverse colon adenocarcinoma after significant preoperative weight loss through a structured dietary intervention.

II. CASE PRESENTATION

A 64-year-old female presented in August 2023 with melaena, anaemia and intermittent constipation. She denied significant changes in bowel habits or weight loss. Her medical history included atrial fibrillation, hypertension, hypothyroidism and chronic back pain. She is on regular rivaroxaban, levothyroxine, pregabalin and amiodarone. She had history of abdominal surgeries or family history of CRC. Clinical examination revealed soft abdomen with discomfort on the right upper quadrant and blood on glove during per rectal examination. Her BMI was 70, classifying her as morbidly obese.

III. INVESTIGATIONS

Initial laboratory results demonstrated:

Hb 56 g/L

eGFR 89 mL/min

CEA 4.6 ug/L

Glucose 5.0 mmol/L

Fe 9 umol/L ,Transferrin 2.3 g/L, Ferritin 397 ug/L

CT imaging revealed thickening of the transverse colon with partial luminal obstruction and proximal bowel dilation, suggestive of malignancy. Colonoscopy confirmed a circumferential adenocarcinoma in the transverse colon. Biopsies showed a high-grade mismatch repair deficient carcinoma, consistent with medullary carcinoma. There was no evidence of metastatic disease on staging scan.

The patient was deemed a high anaesthetic risk due to her obesity and comorbidities. Multidisciplinary planning involved a weight loss physician, colorectal surgeon and anaesthetist. A decision was made to delay surgery to facilitate preoperative weight loss. She was placed on a structured LCHP diet by local surgeon with interest in weight loss management, which has been shown to promote weight loss by reducing caloric intake while preserving lean body mass. A study suggest that such diets may also slow cancer progression by reducing glucose availability, which is essential for tumour growth (6).

The patient achieved significant weight loss of 44 kg over six months, improving her overall fitness for surgery. Repeat imaging in February 2024 confirmed no evidence of metastasis despite the treatment delay. The patient underwent robotic-assisted right hemicolectomy with primary anastomosis. The surgical approach was chosen to minimise the impact of her obesity on operative outcomes. Intraoperatively, a bulky mass in the transverse colon was identified and resected. There was no evidence of peritoneal disease or lymphadenopathy.

Postoperatively patient had an uneventful recovery and was discharged on postoperative day 5. The histopathology examination confirmed a transverse colon medullary carcinoma; mismatch repair protein deficient (pT4N0M0). She was discussed in multidisciplinary team meeting and decision made for active surveillance under surgical team given localised disease.

IV. DISCUSSION

Obesity is a well-established risk factor for CRC and is associated with worse prognosis (3). Excess adiposity contributes to carcinogenesis through mechanisms such as chronic inflammation, insulin resistance, and altered adipokine levels, creating a pro-tumorigenic environment (7, 8). A systematic review published in 2022 highlighted that higher BMI at diagnosis correlates with poorer overall survival and increased cancer-specific mortality, particularly in colorectal cancer (9). Low-carbohydrate, high-protein (LCHP) diets are increasingly recognised for their role in weight management and potential benefits in cancer care. These diets limit glucose availability, which is crucial for tumour growth, and may have a role in slowing cancer progression (6). However, human studies present conflicting results, with some suggesting risks associated with high intake and long-term adherence to such diets (10).

LCHP diets can alter tumour metabolism by reducing glucose availability, theoretically slowing tumour growth since cancer cells often rely on glycolysis (Warburg effect) for energy production, even in oxygen-rich conditions (11). By lowering carbohydrate intake, LCHP diets may reduce insulin and insulin-like growth factor 1 (IGF-1) levels, which are implicated in promoting tumour growth (12). Additionally, increased protein intake can support muscle maintenance, which is particularly beneficial for patients experiencing cancer-related cachexia (13).

Despite potential metabolic benefits, LCHP diets can negatively affect bowel cancer patients due to reduced fibre intake, which is essential for maintaining gut microbiota diversity and bowel function (14). Fibre deficiency may also compromise gut barrier integrity and increase systemic inflammation, potentially worsening outcomes (15). **High intake of animal-based proteins, particularly red and processed meats, is link with increased CRC risk due to the formation of carcinogenic N-nitroso compounds** (16). Furthermore, LCHP diets may lead to nutrient deficiencies, dehydration, and increased cardiovascular risk if not carefully managed (17).

Personalised dietary recommendations are essential for bowel cancer patients thus, LCHP diet is recommended for these patients. Emphasis should be placed on selecting high-quality protein sources such as fish, poultry, legumes, and plant-based proteins to mitigate potential carcinogenic effects associated with red meat (18). Further, incorporating vegetables with low-carbohydrate and high fibre in diet can help maintain good gut health. In this case, the patient's remarkable preoperative weight loss was achieved through a tailored LCHP diet, which improves her surgical outcomes and potentially reducing her cancer progression. Despite 6 months treatment delay, the absence of metastatic disease highlights the importance of personalised dietary and medical strategies in cancer management. This case shows the value of a multidisciplinary approach that integrates dietary counselling, surgical planning, and oncological care for obese cancer patients

V. CONCLUSION

LCHP diets must be approached cautiously in CRC patients due to potential negative impacts on gut health and long-term cancer outcomes although, it look promising in altering cancer metabolism and supporting muscle mass preservation. This case

highlights the interplay between obesity, dietary interventions, and CRC outcomes. The patient's surgical fitness improvement and favourable prognosis were potentially contributed by preoperative weight loss through LCHP diet. Yet, continuous research are needed to better understand the role of diet in cancer prevention and treatment, emphasising the importance of personalised, evidence-based care.
